SA series junction boxes: criteria for choosing the right product

When it comes to deciding on an increased safety enclosure, there is a whole series of essential data to be taken into account if you are to make the right choice: the mechanical strength of the materials, corrosion resistance, the IP protection rating and IK impact protection rating in the case of enclosures for watertight/ industrial use.

Mechanical strength

| Properties | Unit | Stainless steel | Aluminium | Polyester |
|--|----------------------------------|----------------------|----------------------|-----------|
| Density | g/cm ³ | 8.0 | 2.65 | 1.7 |
| Tensile strength | MPa | 500-700 | 80-110 | 130 |
| Elongation | % | 60-40 | 4-10 | 2 |
| Modulus of elasticity | GPa | 193 | 79 | 11 |
| Yield strength | MPa | ≥ 200 | 80-165 | - |
| Coeff. of thermal expansion (20-100°C) | 10 ⁻⁶ K ⁻¹ | 16 | 21 | - |
| Resistivity | Ωm | 7.5x10 ⁻⁷ | 4.8x10 ⁻⁸ | - |
| Electrical conductivity | $\Omega^{-1}m^{-1}$ | 1.33x10 ⁶ | 2.08x10 ⁷ | - |

The graph below gives an overview of what use the various materials are suitable for based on the mechanical stress and harshness of the environmental conditions likely to be encountered.

Corrosion resistance (suitability for outdoor use)

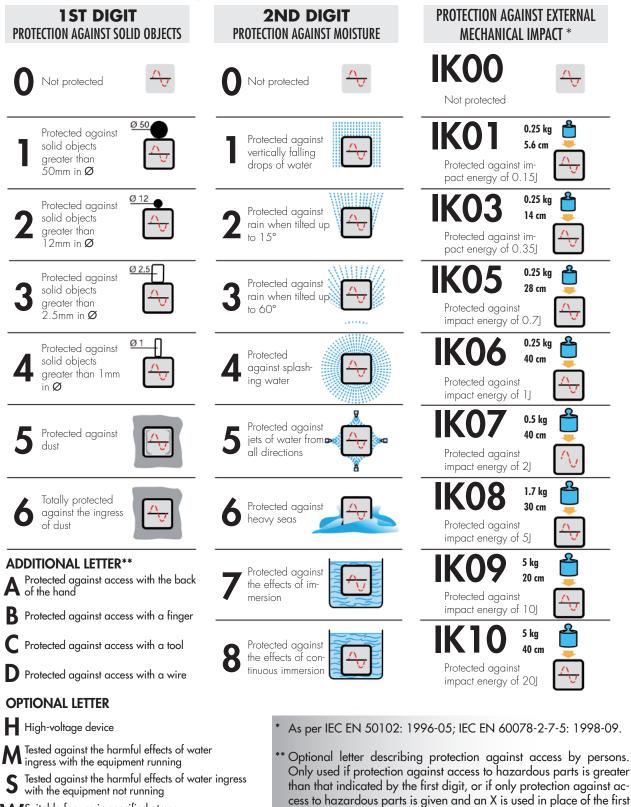

Protection ratings

IP PROTECTION RATINGS (IEC 529, EN 60529-4, CEI 70-1 ed. 11/92)

The table gives protection ratings in accordance with standard CEI 70-1 ed. 11/92. Ratings are identified by the acronym IP followed by 2 digits, to which 2 letters may be added, indicating the degree to which persons are protected against access or other properties There is some variation in the application of ratings 7 and 8 relating to the ingress of liquids, with these ratings not always meaning that the item is suitable for lower levels (whereas IP rating x4 also covers the lower levels).

IMPACT PROTECTION RATINGS

This classification shows the acceptable level of strength, when evaluating a product's safety, and is mainly employed in relation to testing on electromechanical products.

digit.

WSuitable for use in specified atmospheric conditions

SA...SAG series junction boxes are made from aluminium alloy and given an electrostatically applied polyester coating containing stainless steel particles that is then baked at 200°C. This treatment ensures good UV as well as thermal stability, providing mechanical impact resistance and excellent resistance when exposed either to salt mist or to marine and other damp environments. SA and SAG series junction boxes are usually installed in industrial plants where there is a risk of explosion and fire, classified as Zone 1, 2, 21, 22; they are mainly used as junction boxes and/or for routing cables to control rooms for analogue or digital signals and for control, monitoring and signalling associated with equipment such as motors, pumps...etc., or for giving physical readings such as flow rate, level, temperature, pressure, etc.... The thickness of its walls (7mm) means the SAG series is suitable for direct connection with pipes and fittings featuring tapered threads. Cortem's custom solutions offer ATEX- and IECEx-certified components and application solutions devised for use in explosion hazard areas. The expert Cortem team endeavours to meet all customer requests.

TYPE AND APPLICATION

Choosing an appropriate container is a key step in the project development process, making it essential to approach the decision systematically, evaluating all variables methodically: where our equipment is being installed, the environmental conditions on site, what degree of protection it must have, what space is available and how it is due to be set up. Once you have processed all this information, you should be able to determine which product best suits the design requirements in question.

ENVIRONMENTAL CONDITIONS

The first factor to consider is what environmental conditions the equipment is going to be installed in, whether it will be indoors or outside, and what environments it is required to operate in: pharmaceutical, chemical, petrochemical, food, shipbuilding, agricultural industries...

DIMENSIONS

The size of the space available for inserting the enclosure and its components must be determined early on in the process. DESIGN

Taking into account the technical aspect, product design and appearance is also important in ensuring the equipment to be installed in the enclosure is integrated seamlessly. A Cortem team of experts is on hand every day to address your questions and come up with the best solutions.

Cortem enclosures have passed:

- IP protection testing;
- IK strength testing;
- salt mist testing for corrosion resistance;
- heat resistance testing;
- low temperature resistance testing.

Application sectors:

Oil refineries Chemical and Onshore petrochemical plants plants

Offshore Low plants temperatures

w Fuel atures depots

Ships and 100% shipbuilding Cortem

SA and SAG SERIES ENCLOSURES

Models from SA-...series (lightweight series) Thinner walls The body can only accommodate through holes with no threading

GENERAL MECHANICAL PROPERTIES

Models from SAG-...series (heavy-duty series) Extra-thick walls The body can also accommodate threaded holes

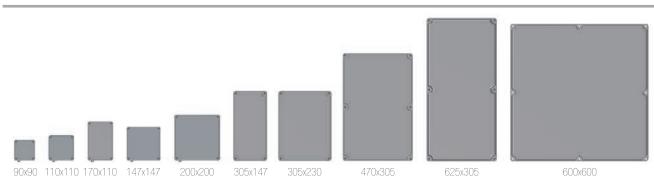

| Body and lid: | Low copper content aluminium alloy |
|---------------------------|--|
| Impact protection rating: | IK10 |
| Gasket: | Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid |
| Certification label: | Aluminium plate riveted onto lid |
| Bolts and screws: | Stainless steel captive variety |
| Earth screws: | Stainless steel. On inside and outside of body complete with anti-rotation brackets |
| Mounting: | Cast aluminium feet for M6 screw |
| Coating: | Polyester RAL 7035 (Light grey) for Exe or RAL 5015 (Sky blue) for Exi |
| Corrosion Resistance : | The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN 60068-2-30 (hot/humid cycles) and EN 60068-2-11 (salt mist tests) |

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Possible drilling of the enclosure bottom A maximum of one hole in the center is allowed, 1" NPT o ISO M32x1,5. Internal anti-condensation coating RAL 2004 (pure orange) External polyester coating in different colour (specify the RAL number) Breather valve; Drain valve Internal mounting plate: stainless steel (code B...-229) Earth screws in stainless steel Terminal block mounting rails (code OBO2060/S) ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phoenix, ABB Entrelec, Wago, Weidmuller. When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals.

Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

Examples of terminal strips with minimum installation distances

> 50mm i terminals

Notes:

Reference must be made to the minimum distances given, bearing in mind the space required for internal wiring.

Only ATEX-certified terminals are allowed inside the enclosures.

Ex i rated terminals must be suitably labelled or coloured differently so they are clearly identifiable.

Ex i cable entries must be suitably identified with either labelling or blue markings on cable glands or the enclosure's sides.

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals.

The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

The permissible maximum power dissipation, in order to retain a T6 temperature class with an ambient temperature up to 40°C or T5 class with an ambient temperature of 55°C, is not to exceed the values given in the tables below. For an ambient temperature of +60°C or +65°C, maximum power dissipation must be reduced by 25%, and rated current reduced by 15%.

The maximum current values for terminal boxes used for low current circuits (signals) with temperature class T6 and maximum ambient temperature +60°C or T4 and maximum ambient temperature +65°C and +85°C are always as given below:

+60°C T6 -> max 1A Ex e, max 100mA Ex ia

+85°C T4 -> max 10A Ex e, max 100mA Ex ia

On the following pages, the table values refer to the maximum number of conductors allowed for a conductor with a given cross-sectional area and subject to a given maximum current. All incoming wires and internal links (made by wires) count as wires; earth connections do not count.

When mounting rails are installed on the internal mounting plate (and not directly on internal ribs of boxes), the number of terminals may be slightly less than the number indicated in the tables.

Other types of terminals can be used up to the space limit of the box. Whatever the case, the terminals used shall be ATEX and/or IECEx certified. Size 35mm² terminals can be used for conductors with a cross-sectional area of 25mm².

The maximum number of terminals and the maximum number of rows shown in the tables is an indicative value; pay attention to the cable entries installed on the sides of boxes. The internal overall dimensions of cable glands and the overall dimensions of conductors must be taken into consideration to allow for wiring.

In some cases, it may be necessary to reduce the number of terminals or the number of rows.

Example for the calculation of the maximum number of conductors.

Refer to table for SA141410: 6 conductors with $6mm^2$ cross-section with 26A continuous current is the limit of this box. Consequently, SA141410 is suitable for containing 3 x $6mm^2$ terminals (2 conductors for each terminal) with a max. current of 26A. There is space for 11 x $6mm^2$ terminals in the box. The remaining 8 terminals (11-3) can be added and used for low current circuits indicated in area "yellow" of the table (in this case max. 8-10A).

Combined mounting for electrical circuits with different sized cables is possible provided the values given are used proportionally. For example:

| Nominal X-sect. area (mm²) | Current (A) | Quantity | Capacity |
|----------------------------|-------------|------------|-------------|
| 2,5 | 8 | 16 (di 46) | 34,8% |
| 4 | 11 | 12 (di 36) | 33,3% |
| 10 | 26 | 4 (di 13) | 30,8% |
| | | Total | 98,9% <100% |

Instructions for determining which enclosure is best suited based on the planned number of conductors and terminals.

: In this unfilled area, provided the relevant instructions are followed and the permitted measurements given for devices housed inside the enclosure are complied with, any number of terminals can be added up to the space limit of the box.

: Fitting in this unfilled area is not covered by this certification.

"C. No." row: values shown in the cells define the maximum number of CABUR terminals physically allowed inside the relevant enclosure. These values are expressed as a product of the rows multiplied by the number of terminals on each row.

"W. No." row: the same as above, but referred to the Weidmuller terminals.

The terminal brands are mentioned just to give an idea of the number of terminals that can be installed inside the enclosures.

The other values shown in the cells along the table's diagonal define the maximum number of conductors allowed, depending on their cross-sectional area and the maximum current that flows through them.

Maximum power dissipation with T6 temperature class must not exceed 52W

Codes of terminals used to determine maximum number of terminals/conductors.

The other values shown in the cells along the table's diagonal define the maximum number of conductors allowed, depending on their cross-sectional area and the maximum current that flows through them.

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:600 V ac/dcMax. current on contacts:16 ARated frequency:50 / 60Hz

MINIMUM DISTANCES BETWEEN CORTEM Ex e CONTACTS (e.g. with reference to CESI 03 ATEX 115 certificate)

Key:

- 1. indicator light M-0612
- 2. rotating selector M-0604
- 3. emergency stop pushbutton M-0605
- 4. contact block M-0530
- 5. contact block M-0531
- 6. pushbutton M-0603
- 7. earth bar
- 8. terminals
- 9. internal mounting plate

Notes:

"e">12mm: standard version.

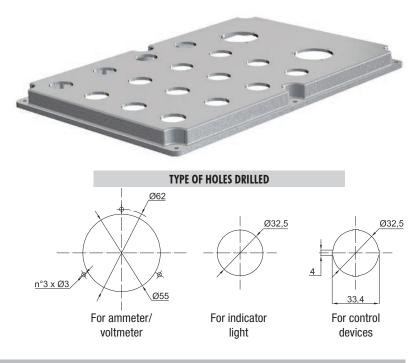

Suitable for voltage U<800V

"e">5mm: special versions. Suitable for voltage U<250V

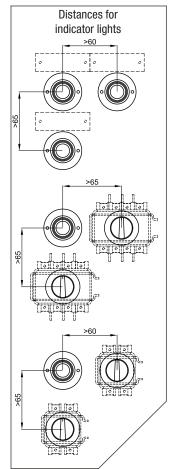

When determining enclosure size, what holes are drilled and what devices can be installed, we also need to take into account the space required for internal wiring and running the cables.

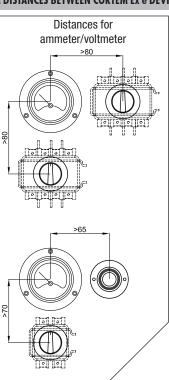

SA, SAG... series Lid drilling data

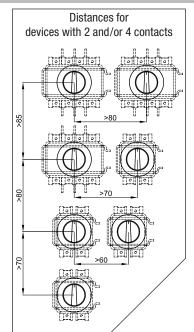

| TYPE OF ENCLOSURE | Drilling area mm |
|----------------------|---------------------|
| SA090907 | 70x70 |
| SA/SAG111108 | 90x90 |
| SA/SAG171108 | 90x150 |
| SA/SAG141410 | 127x127 |
| SA202012 | 180x180 |

| SA/SAG302310 | 210x285 |
| SA/SAG302318 | 210x285 |
| SA/SAG473018 | 285x450 |
| SAG623018 | 280x595 |
| SAG606018 | 505x505 |

MINIMUM DISTANCES BETWEEN CORTEM Ex e DEVICES FOR PUSHBUTTON CONTROL STATIONS

KEY 4-contact device

2-contact device

Ammeter/voltmeter

Indicator light

Notes:

Minimum distances between devices worked out for use of standard 60x20 plates.

Option of using up to 4 contacts per device for pushbutton M-0603 and selector M-0604.

Option of using up to 2 contacts per device for emergency stop pushbutton M-0605.

For more information, refer to the Ex e control, monitoring and signalling devices chapter.
