## CTB series junction boxes: criteria for choosing the right product

When it comes to deciding on an increased safety enclosure, there is a whole series of essential data to be taken into account if you are to make the right choice: the mechanical strength of the materials, corrosion resistance, the IP protection rating and IK impact protection rating in the case of enclosures for watertight/ industrial use.

### Mechanical strength

Properties	Unit	Stainless steel	Aluminium	Polyester
Density	g/cm <sup>3</sup>	8.0	2.65	1.7
Tensile strength	MPa	500-700	80-110	130
Elongation	%	60-40	4-10	2
Modulus of elasticity	GPa	193	79	11
Yield strength	MPa	≥ 200	80-165	-
Coeff. of thermal expansion (20-100°C)	10 <sup>-6</sup> K <sup>-1</sup>	16	21	-
Resistivity	Ωm	7.5x10 <sup>-7</sup>	4.8x10 <sup>-8</sup>	-
Electrical conductivity	Ω <sup>-1</sup> m <sup>-1</sup>	1.33x10 <sup>6</sup>	2.08x10 <sup>7</sup>	-

The graph below gives an overview of what use the various materials are suitable for based on the mechanical stress and harshness of the environmental conditions likely to be encountered.

# Protection ratings

## IP PROTECTION RATINGS (IEC 529, EN 60529-4, CEI 70-1 ed. 11/92)

The table gives protection ratings in accordance with standard CEI 70-1 ed. 11/92. Ratings are identified by the acronym IP followed by 2 digits, to which 2 letters may be added, indicating the degree to which persons are protected against access or other properties. There is some variation in the application of ratings 7 and 8 relating to the ingress of liquids, with these ratings not always meaning that the item is suitable for lower levels (whereas IP rating x4 also covers the lower levels).

## IMPACT PROTECTION RATINGS

This classification shows the acceptable level of strength, when evaluating a product's safety, and is mainly employed in relation to testing on electromechanical products.

1ST DIGIT PROTECTION AGAINST SOLID OBJECTS	2ND DIGIT PROTECTION AGAINST MOISTURE	PROTECTION AGAINST EXTERNAL MECHANICAL IMPACT *
<b>0</b> Not protected 	<b>0</b> Not protected 	<b>IK00</b> Not protected 
<b>1</b> Protected against solid objects greater than 50mm in Ø 	<b>1</b> Protected against vertically falling drops of water 	<b>IK01</b> 0.25 kg 5.6 cm Protected against impact energy of 0.15J 
<b>2</b> Protected against solid objects greater than 12mm in Ø 	<b>2</b> Protected against rain when tilted up to 15° 	<b>IK03</b> 0.25 kg 14 cm Protected against impact energy of 0.35J 
<b>3</b> Protected against solid objects greater than 2.5mm in Ø 	<b>3</b> Protected against rain when tilted up to 60° 	<b>IK05</b> 0.25 kg 28 cm Protected against impact energy of 0.7J 
<b>4</b> Protected against solid objects greater than 1mm in Ø 	<b>4</b> Protected against splashing water 	<b>IK06</b> 0.25 kg 40 cm Protected against impact energy of 1J 
<b>5</b> Protected against dust 	<b>5</b> Protected against jets of water from all directions 	<b>IK07</b> 0.5 kg 40 cm Protected against impact energy of 2J 
<b>6</b> Totally protected against the ingress of dust 	<b>6</b> Protected against heavy seas 	<b>IK08</b> 1.7 kg 30 cm Protected against impact energy of 5J 
<b>ADDITIONAL LETTER**</b>	<b>7</b> Protected against the effects of immersion 	<b>IK09</b> 5 kg 20 cm Protected against impact energy of 10J 
<b>A</b> Protected against access with the back of the hand	<b>8</b> Protected against the effects of continuous immersion 	<b>IK10</b> 5 kg 40 cm Protected against impact energy of 20J 
<b>B</b> Protected against access with a finger		
<b>C</b> Protected against access with a tool		
<b>D</b> Protected against access with a wire		

### OPTIONAL LETTER

- H** High-voltage device
- M** Tested against the harmful effects of water ingress with the equipment running
- S** Tested against the harmful effects of water ingress with the equipment not running
- W** Suitable for use in specified atmospheric conditions

\* As per IEC EN 50102: 1996-05; IEC EN 60078-2-7-5: 1998-09.

\*\* Optional letter describing protection against access by persons. Only used if protection against access to hazardous parts is greater than that indicated by the first digit, or if only protection against access to hazardous parts is given and an X is used in place of the first digit.

## CTB... series (Ex e) and (Ex i) stainless steel junction boxes

CTB, CSTB junction box series is made from AISI 316L stainless steel sheet to ensure correct service in the aggressive environments it is installed in. With their high standard of quality and use of select raw materials processed with cutting-edge technologies, these boxes successfully withstand harsh external factors, such as water, dust, hard knocks, vibrations, corrosion and extreme fluctuations in temperature, ensuring a very long period of consistently reliable service. CTB, CSTB series enclosures are usually installed in industrial plants where there is a risk of explosion and fire, classified as Zone 1, 2, 21, 22; they are mainly used as junction boxes or for routing cables for analogue or digital signals and for control and monitoring associated with equipment such as motors, pumps...etc.. The enclosures' main purpose is to protect the components inside from external factors, such as moisture or dust, which means they must have a suitable IP rating. Cortem tests its enclosures according to standard EN 60529 in its own accredited laboratory to provide assurance that this requirement is met. Cortem works alongside customers as a reliable partner, configuring custom solutions tailored to their individual requirements and offering an extensive range of ideal products and components that are configured to produce cost-effective bespoke solutions.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumeric univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

### TYPE AND APPLICATION

Choosing an appropriate container is a key step in the project development process, making it essential to approach the decision systematically, evaluating all variables methodically: where our equipment is being installed, the environmental conditions on site, what degree of protection it must have, what space is available and how it is due to be set up. Once you have processed all this information, you should be able to determine which product best suits the design requirements in question.

### ENVIRONMENTAL CONDITIONS

The first factor to consider is what environmental conditions the equipment is going to be installed in, whether it will be indoors or outside, and what environments it is required to operate in: pharmaceutical, chemical, petrochemical, food, shipbuilding, agricultural industries...

### DIMENSIONS

The size of the space available for inserting the enclosure and its components must be determined early on in the process.

### DESIGN

Taking into account the technical aspect, product design and appearance is also important in ensuring the equipment to be installed in the enclosure is integrated seamlessly. A Cortem team of experts is on hand every day to address your questions and come up with the best solutions.

Cortem enclosures have passed:

- IP protection testing;
- IK strength testing;
- salt mist testing for corrosion resistance;
- heat resistance testing;
- low temperature resistance testing.

### Application sectors:

Oil refineries

Chemical and  
petrochemical  
plants

Onshore  
plants

Offshore  
plants

Low  
temperatures

Fuel  
depots

Ships and  
shipbuilding

# CTB... series (Ex e) and (Ex i) stainless steel junction boxes

## EXPLODED VIEW OF ACCESSORIZED CTB ENCLOSURE

## MECHANICAL FEATURES

<b>Body and lid:</b>	AISI 316L stainless steel
<b>Hinges:</b>	Stainless steel AISI 316L (included on CTB series, non included on CSTB series)
<b>Impact protection rating:</b>	IK10
<b>Gasket:</b>	Resistant to acids, hydrocarbons and high temperatures, located between body and lid. Ensures consistent protection to IP66 during use
<b>Certification label:</b>	Stainless steel plate riveted onto lid
<b>Removable gland plates:</b>	Stainless steel thickness 30/10
<b>Bolts and screws:</b>	Stainless steel captive variety
<b>Earth screws:</b>	Brass. On inside and outside of body complete with anti-rotation brackets
<b>Mounting:</b>	Welded AISI 316L stainless steel feet

## ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Body and cover thickness of 3 mm (Code CTB262616/3) Please refer to the sales offices for availability

Possible drilling of the enclosure bottom

Internal anti-condensation coating RAL 2004 (pure orange)

External polyester coating in different colour (specify the RAL number)

Breather valve; Drain valve

Internal mounting plate: stainless steel (code B...-443)

Earth screws in stainless steel

Terminal block mounting rails (code OBO2060/S)

Padlocking system; padlock (code VIRO552)

ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phoenix, ABB, Entrelec, Wago, Weidmuller. When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals.

Hole options: through holes with no threading

**Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.**

Simplified system for lid fixing with key locking system  
Double Beard type:

(Example of order code CTB484816C)

*Installation of one key locking system up to model CTB262620  
Installation of two key locking systems up to model CTB624520*

# CTB... series Features of junction boxes with terminals

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting plates. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

## ELECTRICAL FEATURES

# CTB... series Features of junction boxes with terminals

## Examples of terminal strips with minimum installation distances

### Notes:

Reference must be made to the minimum distances given, bearing in mind the space required for internal wiring.

Only ATEX-certified terminals are allowed inside the enclosures.

Ex i rated terminals must be suitably labelled or coloured differently so they are clearly identifiable.

Ex i cable entries must be suitably identified with either labelling or blue markings on cable glands or the enclosure's sides.

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals. The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

## CTB... series Features of junction boxes with terminals

The permissible maximum power dissipation, in order to retain a T6 temperature class with an ambient temperature up to +40°C or T5 class with an ambient temperature of 55°C, is not to exceed the values given in the tables below. For an ambient temperature of +60°C or +65°C, maximum power dissipation must be reduced by 25%, and rated current reduced by 15%.

The maximum current values for terminal strips used for low-voltage circuits (signalling units) with a T6 temperature class and maximum ambient temperature of +60°C or T4 and maximum ambient temperature +65°C and +85°C are as follows:

+60°C T6 -> max 1A Ex e, max 100mA Ex ia

+85°C T4 -> max 10A Ex e, max 100mA Ex ia

The values given in the tables on the coming pages refer to the maximum number of conductors allowed for a conductor with a given cross-sectional area and a given maximum current. All incoming wires and active internal links (made by wires) count as wires. Earth connections (i.e. passive connections) do not count.

When DIN/Omega rails are installed on the internal mounting plate (instead of using the relevant mounting plate fastening holes), the number of terminals may be slightly less than the number given in the tables.

Other types of terminals can be used up to the space limit of the box. Whatever the case, all terminals used shall be ATEX and/or IEC Ex certified. Size 35mm<sup>2</sup> terminals can be used for conductors with a cross-sectional area of 25mm<sup>2</sup>.

The maximum number of terminals and maximum number of rows given in the tables is an indicative value: you must take into account the cable entries on the sides of the boxes. The internal overall dimensions of cable glands/lock nuts and the overall dimensions of conductors must be taken into consideration to allow for wiring.

In some cases, it may be necessary to reduce the number of terminals or the number of rows.

Example of how to calculate the maximum number of conductors.

Referring to table CTB262620: 6 conductors with 6mm<sup>2</sup> cross-section with 26A continuous current is the limit of this box. Consequently, box CTB262620 is suitable for containing 3 x 6mm<sup>2</sup> terminals (2 conductors for each terminal) with a max. current of 26A.

There is space for 32 x 6mm<sup>2</sup> terminals in the box. The remaining 29 terminals (32-3) can be added and used for low-current circuits indicated in the "yellow-coloured" area of the table (in this case max. 8-10A).

Combined mounting for electrical circuits with different sized cables is possible provided the values given are used proportionally.

For example:

Nominal X-sect. area (mm <sup>2</sup> )	Current (A)	Quantity	Capacity
2,5	8	16 (di 46)	34,8%
4	11	12 (di 36)	33,3%
10	26	4 (di 13)	30,8%
		Total	98,9% <100%

# CTB... series Features of junction boxes with terminals

Instructions for determining which enclosure is best suited based on the planned number of conductors and terminals.

: In this section of the table that has not been filled in, once you have followed the instructions and complied with the values given for the enclosure's internal wiring, you can add as many terminals as you want up to the space limit of the box.

: Any wiring that falls within this section of the table that has not been filled in is not covered by the certificate.

"C. No." row: the values given refer to the maximum number of CABUR terminals physically allowed inside the relevant enclosure. These values are expressed as the product of the rows multiplied by the number of terminals.

"W. No." row: the same as above, but this time referring to Weidmuller terminals.

The terminal brands are mentioned just to give an idea of the quantity of terminals that can be housed inside the enclosure.

The other values given in the cells along the table's diagonal define the maximum number of conductors allowed, based on their cross-sectional area and maximum current.

## Tables showing maximum number of conductors

$$(N^{\circ} \text{ of terminals} = \frac{n^{\circ} \text{ of conductors}}{2})$$

# CTB... series Features of junction boxes with terminals

## Codes of terminals used to determine maximum number of terminals

The other values given in the cells along the table's diagonal define the maximum number of conductors allowed, based on their cross-sectional area and maximum current.

## ATEX - IECEx label for terminal enclosures

### Data filled in:

1. year of manufacture
2. serial number
3. product code
4. ambient temperature
5. temperature class and maximum surface
6. temperature of cables
7. electrical specs per certificate

## TYPICAL EXAMPLES OF TERMINAL BLOCK INSTALLATION

Example of feed-through terminal installation on top hat rail fastened to stainless steel internal mounting plate.

Example of feed-through terminal installation on top hat rail fastened on two pre-drilled mounting rails.

## DON'T FORGET TO ORDER THE ACCESSORIES

Example: Enclosure type **CTB484820** + Terminal mounting rails **OBO2060/S** + Cable glands, unions + other...see key

# CTB... series Features of junction boxes with equipment

## JUNCTION BOXES WITH EQUIPMENT (FIELDBUS, PROXIMITOR, HEATER...)

Example of junction box with thermostat

Example of junction box with proximator

Example of junction box with transmitter

Equipment that can be installed in the junction boxes in accordance with the CML 16 ATEX 3163X or IECEx CML 16.0074X certificate are described in the following table:

# CTB... series (Ex e) and (Ex i) stainless steel junction boxes

Ex e

Zone 1,2,21,22.  
Degree of protection IP66.  
Stainless steel body and lid.  
Acid/hydrocarbon-resistant gasket.  
Stainless steel bolts and screws.  
Impact protection IK10.

## Ordering details

Standard stainless steel enclosure: **CSTB121208**

Width/Depth/Height: **120/120/80mm**

## Certification data for enclosures with terminals

Group II Category 2GD

Zone 1 - Zone 2 (Gas) Zone 21 - Zone 22 (Dust)

II 2GD Ex eb IIC T.. Gb - Ex tb IIIC T.. Db IP66

II 2GD Ex ia IIC T.. Gb - Ex ia IIIC T.. Db IP66

II 2GD Ex eb ia IIC T.. Gb - Ex tb ia IIIC T.. Db IP66

Ambient temperature: -40°C +55°C (+40°C)

Certification:

CESI 03 ATEX 333 (ATEX)

IEC Ex CES 13.0001 (IECEX)

Russian (GOST R)

Brazilian (INMETRO)

## Accessories

	CODE
Breather and drain valve:	<b>ECD-210S</b>

Other:

Internal anti-condensation coating  
External epoxy coatings in different colour  
Body and cover thickness of 3 mm  
M6 or M8 through earth connection  
Possible drilling of the enclosure bottom  
Key locking system

## Max. number of terminals

X-SECT.	QTY.
1.5 mm <sup>2</sup>	8
2.5 mm <sup>2</sup>	5

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals.

The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

## Number of cable glands

Hole type	Standard enclosure	
	A/C	B/D
M16	2	3
M20	2	3
M25	2	3

Research conducted using Cortem's new NAV and NEV series cable glands.

As required by the current standard, holes can be drilled by Cortem or by authorized partners who hold a production notification in accordance with ATEX Directive .

Width/Depth/Height: **620/450/160mm**

## Certification data for enclosures with terminals

Group II Category 2GD

Zone 1 - Zone 2 (Gas) Zone 21 - Zone 22 (Dust)

II 2GD Ex eb IIC T.. Gb - Ex tb IIIC T.. Db IP66

II 2GD Ex ia IIC T.. Gb - Ex ia IIIC T.. Db IP66

II 2GD Ex eb ia IIC T.. Gb - Ex tb ia IIIC T.. Db IP66

Ambient temperature: -40°C +55°C (+40°C)

Certification:

CESI 03 ATEX 333 (ATEX)

IEC Ex CES 13.0001 (IECEX)

Russian (GOST R)

Brazilian (INMETRO)

## Accessories

	CODE
1.5mm-thick stainless steel internal mounting plate:	<b>B62-443</b>
Terminal block mounting rails:	<b>OBO2060/S</b>
Breather and drain valve:	<b>ECD-210S</b>

Other:

- Padlocking system
- Internal anti-condensation coating
- External epoxy coatings in different colour
- Body and cover thickness of 3 mm
- Clip for grouping cables in single bundle
- M6 or M8 through earth connection
- Possible drilling of the enclosure bottom
- Key locking system

## Ordering details for boxes with removable gland plates

### Removable gland plate position coding

### Ordering code examples

#### 1) CTB503516S3

500x350x160 stainless steel box with 3 removable gland plates

#### 2) CTB624520S4

620x450x205 stainless steel box with 4 removable gland plates

## Max. number of terminals

X-SECT.	QTY.
2.5 mm <sup>2</sup>	3x97
4 mm <sup>2</sup>	3x81
6 mm <sup>2</sup>	3x61
10 mm <sup>2</sup>	2x48
16 mm <sup>2</sup>	2x40
25 mm <sup>2</sup>	2x30
35 mm <sup>2</sup>	2x30
50 mm <sup>2</sup>	2x26
70 mm <sup>2</sup>	2x23

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals.

The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

## Number of cable glands

Standard enclosure			With removable gland plates		
Hole type	A/C	B/D	Hole type	A/C	B/D
M20	20	28	M20	19	22
M25	18	24	M25	16	16
M32	7	10	M32	7	7
M40	6	9	M40	6	6
M50	5	7	M50	5	5
M63	4	6	M63	4	4

Research conducted using Cortem's new NAV and NEV series cable glands.

As required by the current standard, holes can be drilled by Cortem or by authorized partners who hold a production notification in accordance with ATEX Directive .
